GST-Invoice — User Manual

Complete Visual Operating Guide for Catering & Hospitality Businesses

1. System Overview & Architecture

GST-Invoice is a specialized GST accounting and invoicing application built for catering businesses. It handles sales invoicing, purchase recording, input tax credit (ITC) tracking, GSTR-1 and GSTR-3B return generation, and secure document storage.

• Integer Paise Arithmetic: Eliminates floating point errors by storing all currency in integer paise (¹1 = 100 paise).
• Server-Side Calculation: All tax computations and rounding are authoritatively verified by the server engine.
• Private S3 Storage: Invoices, vendor bills, and contract attachments are securely stored in private object storage.

2. Sign-In & User Roles

Default Credentials for local development & administrative access:
• Email: login@genrecai.com
• Password: genrecai
• Roles: Owner (Full business management and configuration) and Accountant (Daily sales, purchases, and parties).

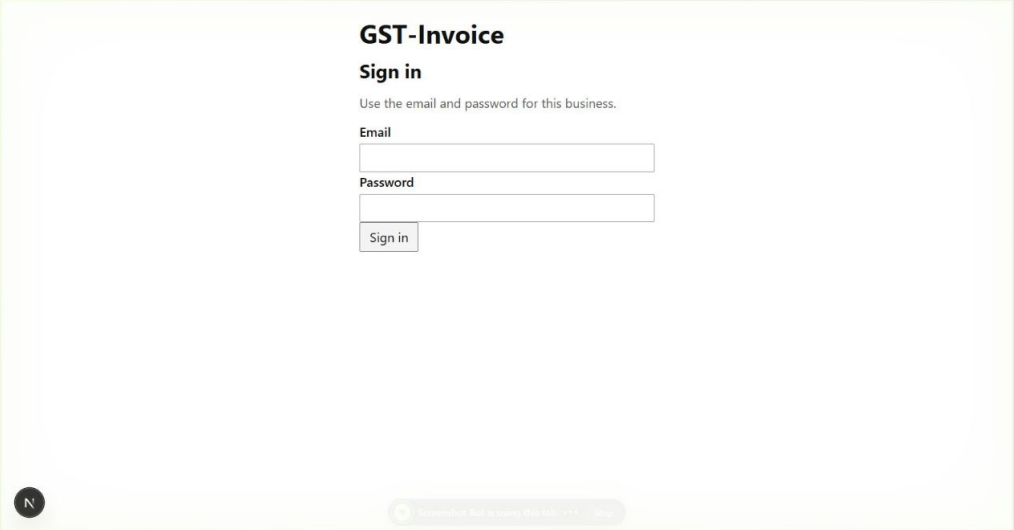

Figure 1: Application Login Screen (/login)

3. Dashboard & Period Tracking

The Dashboard displays the active filing period (e.g. November 2026 / 2026-11), fiscal year, business trade name, and quick navigation across Sales, Purchases, Parties, and Settings.

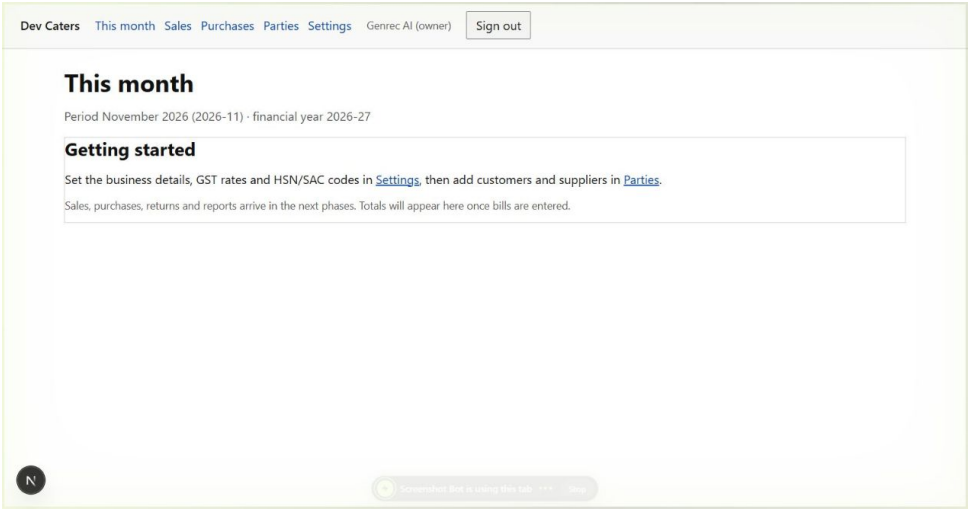

Figure 2: Main Dashboard (/)

4. Settings & Business Configuration

Configure legal name, GSTIN, PAN, state code, filing frequency (Monthly/Quarterly), and tax rates in Settings (/settings).

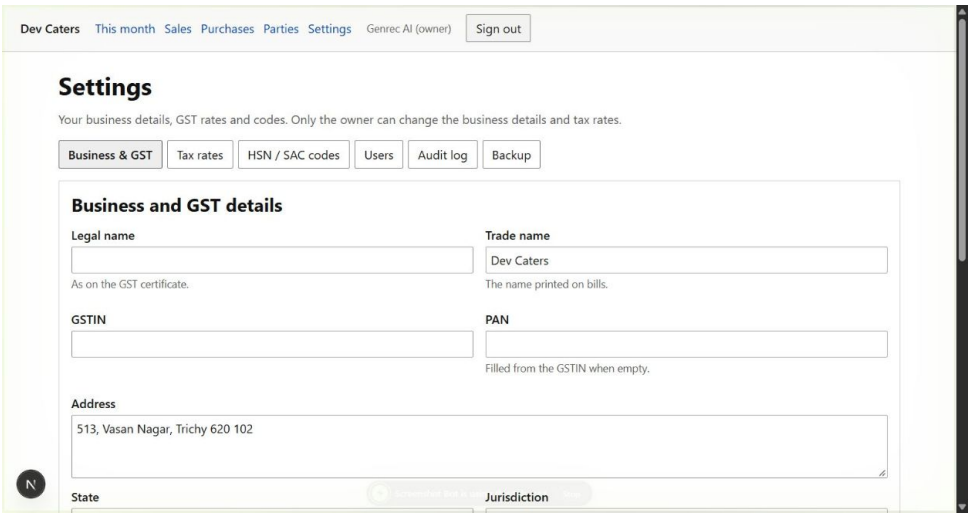

Figure 3: Business & GST Settings Tab

5. Tax Rates & HSN Master Data

Tax rates are stored in basis points (500 bp = 5%, 1800 bp = 18%). Standard HSN/SAC codes for catering include 996331 (restaurant & outdoor catering without ITC) and 996332 (banquet and hotel catering).

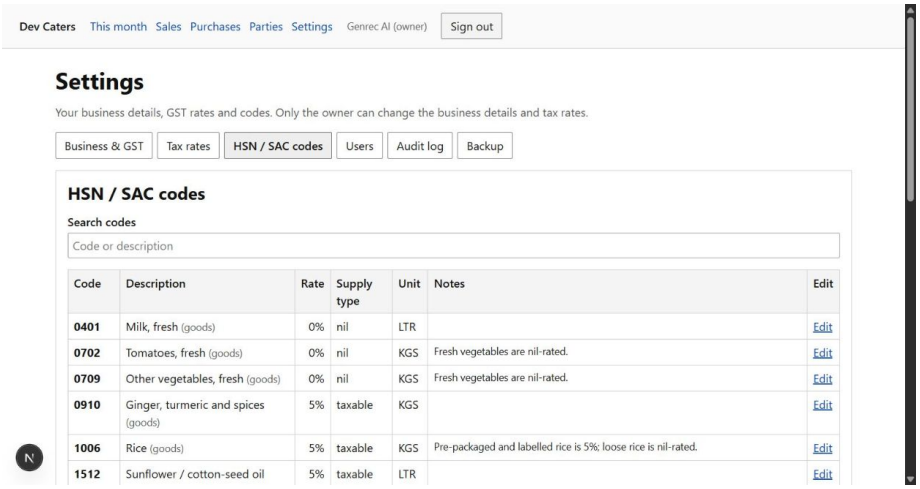

Figure 5: HSN / SAC Codes Master List

6. Parties Management (Customers & Suppliers)

Manage clients and vendors in Parties (/parties). When adding a party:
• Kind: Select Customer or Supplier.
• Name & GSTIN: Enter legal business name and 15-character GSTIN (or leave blank for unregistered retail consumers).
• State: Dictates whether supplies are intra-state (CGST+SGST) or inter-state (IGST).

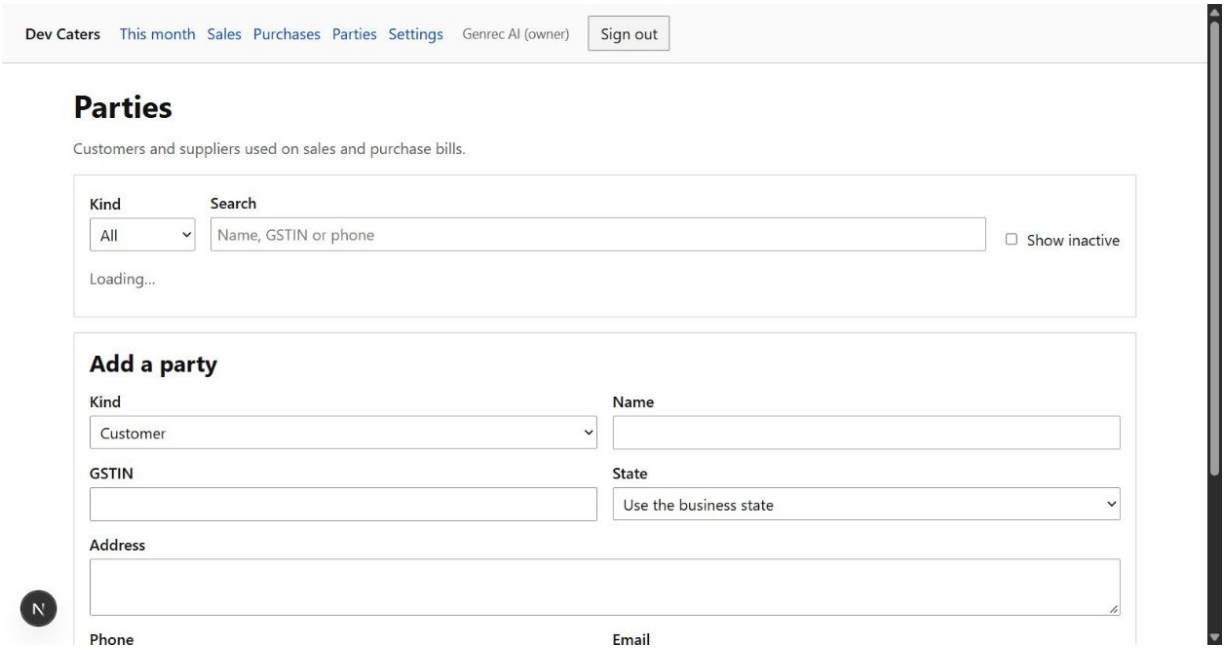

Figure 6: Parties Management Screen (/parties)

7. Sales Invoicing Workflow

Create professional GST tax invoices with live server-calculated taxes:
1. Navigate to Sales (/sales) and click New invoice.
2. Select customer, enter line items (description, HSN, quantity, unit rate, and GST rate).
3. Live preview calculates Taxable value, CGST, SGST, IGST, and Round-Off.
4. Save invoice and download high-resolution PDF for printing and sharing.

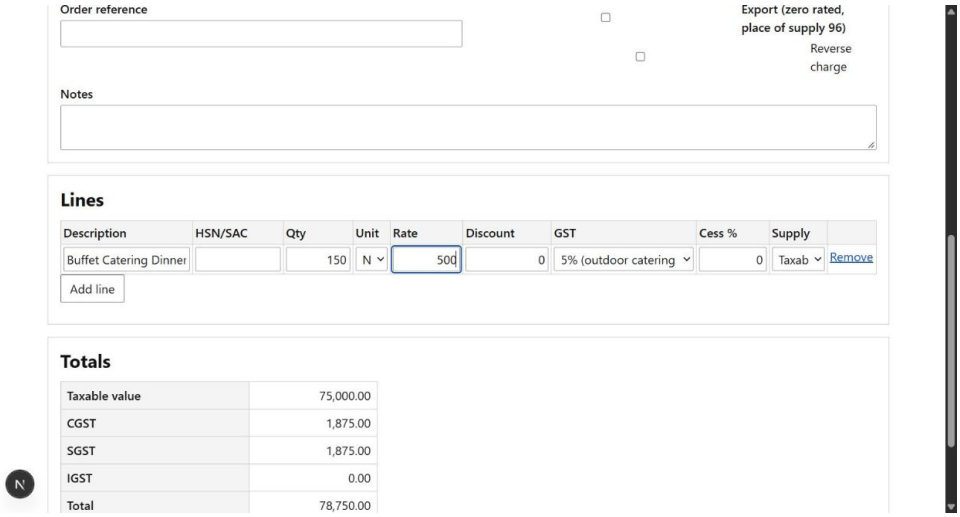

Figure 8: New Sales Invoice Form with Live Tax Computation

8. Purchases & Input Tax Credit (ITC)

Record inward supplier bills and track eligible vs blocked ITC:
• Supplier Bill Number: Enter original bill reference.
• Category: Inputs, Input services, Capital goods, or Expense (Blocked ITC).
• ITC Period: Month in which the credit is claimed in GSTR-3B.

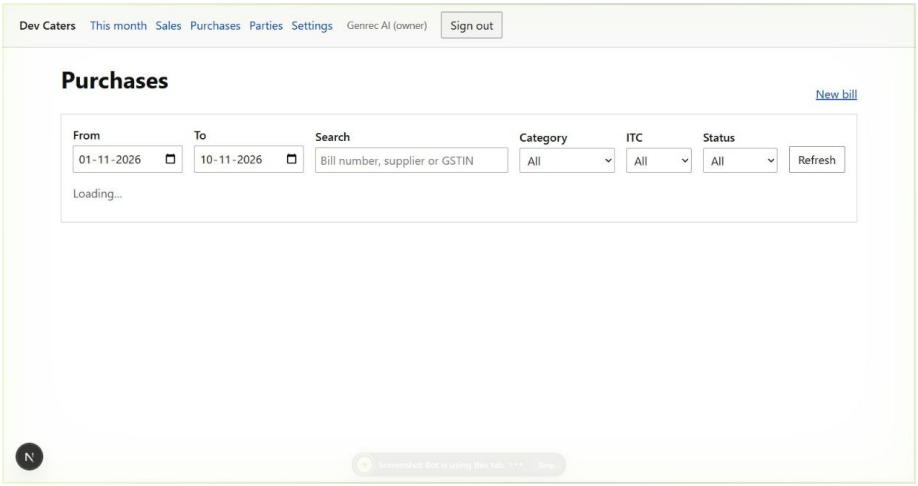

Figure 9: Purchases List (/purchases)

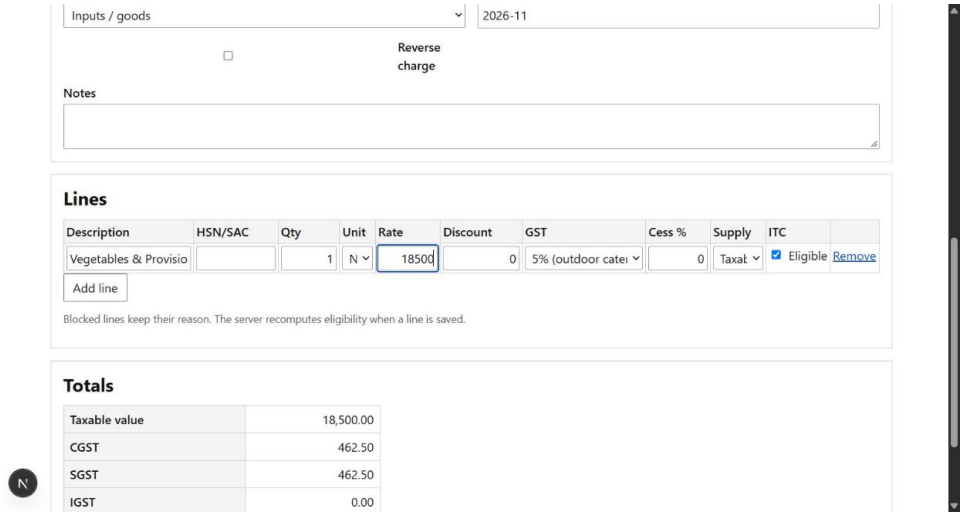

Figure 10: New Purchase Bill Form with ITC Classification

9. Returns, Audit Trail & Document Storage

• GST Returns: Automatic compilation into GSTR-1 (B2B, B2CL, B2CS, HSN) and GSTR-3B (Output tax liability and ITC net set-off).
• Document Attachments: Upload bill photos and PDF contracts (up to 10 MB) into secure private S3 storage.
• Audit Log: Complete audit log tracking every user action with before and after snapshots.

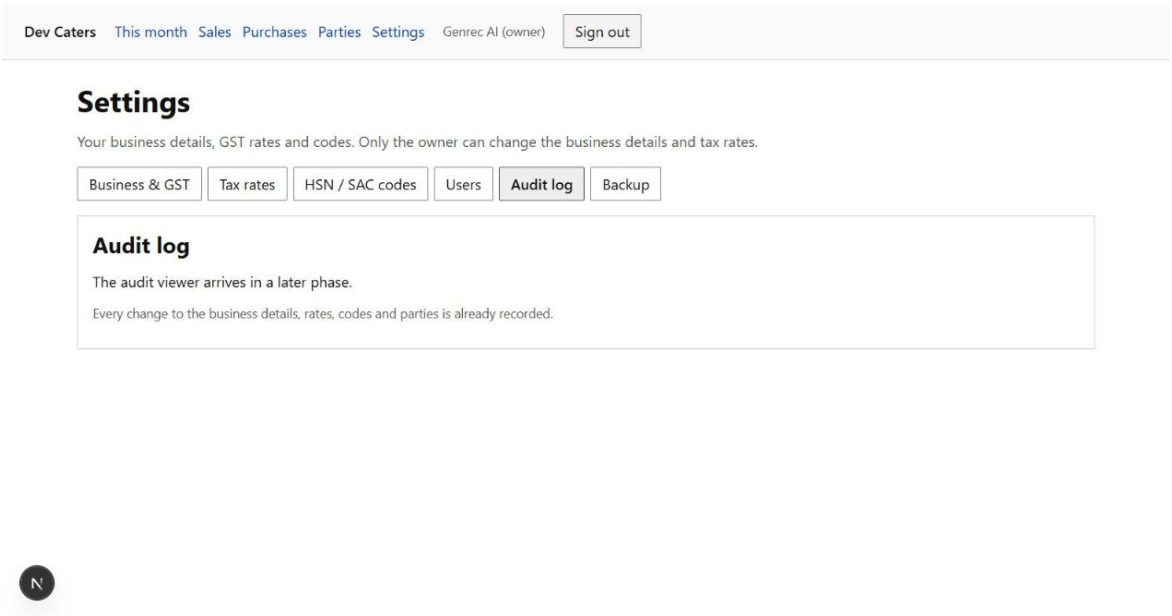

Figure 11: Compliance Audit Log Viewer (/settings)

Summary Checklist for Monthly Operations:

1. Record all sales bills and ensure invoice numbers follow continuous sequence.
2. Enter all supplier purchase bills and verify ITC eligibility flag.
3. Compare monthly sales with GSTR-1 figures.
4. Verify eligible ITC in GSTR-3B.
5. File return, record ARN, and lock the period.
